

19th September 2018

To: Heads/Managers of Nurseries & Schools and School Nurses

Dear Head / School Nurse

WINTER READINESS

We are writing ahead of the approaching winter, to assist you in preparing for the season and in order to reduce the spread of infection in childcare settings and in the wider community.

The guidance documents are available on the following website:

<https://www.england.nhs.uk/south/info-professional/public-health/infection-winter/>

Children and staff in educational settings are particularly susceptible to the spread of infections, such as seasonal influenza (flu) and gut infections (such as norovirus) which increase over the winter months. Outbreaks often occur due to the close contact between children and staff. However, the impact can be reduced by following the advice provided and by adopting good infection control practices.

It is important that all children from aged 2 to 9 years are immunised against flu. Children develop the same range of symptoms as adults and can become very ill, or even die, from flu, but if young children become unwell they are also particularly likely to spread infections to other vulnerable people. Immunising children against flu can therefore protect them, their families, and also the wider community in which they live.

Children aged 2 and 3 years old are offered the vaccine via their GP, whilst those aged 4 – 9 years (Reception to Year 5) will be offered the vaccine at school, via their local school aged immunisation provider. Children and staff in at-risk groups* of any age are also offered immunisation via their GP.

We have developed a number of documents that we hope will help you prepare for the forthcoming season, avoid illness in children and staff and minimise disruption to your services.

* see <http://www.nhs.uk/Conditions/vaccinations/Pages/who-should-have-flu-vaccine.aspx>

The key messages are:

1. **Be prepared** – go through the attached checklists for flu and norovirus and ensure you are prepared in terms of infection control procedures and vaccination
2. **Recognise outbreaks** – the Spotty Book will give you information on how to recognise outbreaks. You should be particularly aware of the influenza, norovirus/gastroenteritis and meningococcal chapters in the forthcoming winter season.
3. **Report outbreaks** to your local health protection team seven days a week

Tel: 0300 303 8162 Option 1 (Health Protection)

Please have at hand;

- Numbers of affected children and staff
- Date of onset of the first and most recent case
- Signs, symptoms and duration of illness
- Locations of affected cases e.g. one class or year group or all areas are affected
- Any hospitalised cases
- Notify any co-circulating scarlet fever

If you have any queries about this letter please contact your PHE Centre (see above). Your support in helping to avoid further spread in the community by promoting the advice would be greatly appreciated.

We thank you for your support in this.

Yours sincerely

Dr Fiona Neely
